Artist statement

In the soft quietude of a medical office, a patient presents for a routine check-up. Nothing of intense acuity, nor high pressured environment, just routine screening for an array of descriptive diseases.

An art piece titled "A Glimpse Beyond" comes to life—an image depicting a medical professional, holding an ophthalmoscope as a tool not just for viewing the physical eye but for peering into the life of the patient. Through its lens, the eye reveals more than clinical detail. It provides a vibrant reflection of the patient's life—a vivid tableau of their personal history. Inside this ocular portal, moments of joy and love unfold: a child's carefree laughter with their parents, a future love that will one day create a beautiful family, a serene home basked in the sunset's glow, and

wise friends sharing unguarded joy. These warm, rich vignettes contrast starkly with the cool-toned clinical surroundings, embodying the juxtaposition of clinical sterility with life's vibrancy. The painting meticulously balances hyperrealism with surreal symbolism using soft, luminous reflections and future predictions to underscore the depth of human experience viewed through the ophthalmoscope.

This artwork serves as a profound reminder that behind every patient is a story woven from a myriad of memories, urging medical professionals to perceive each individual as more than their ailment. For medical students and trainees, *A Glimpse Beyond* reinforces an essential lesson in medical education: while mastering clinical skills is fundamental, true patient care requires the ability to see beyond lab values and imaging to recognize the person behind the diagnosis. Cultivating this perspective early on fosters a deeper sense of empathy and humanism in medicine. *A Glimpse Beyond* is not just a testament to medical expertise but a call for all medical professionals to foster empathy and compassion, taking their medical practice just a glimpse beyond.

Media

"A glimpse beyond" is a piece of digital art that was created by the generative artificial intelligence software ImagineArt. The subject demonstrated in the image is fictional and does not depict real individuals.

Conflicts of Interest: We declare that we have no conflicts of interest relevant to this work.
