Cover. The picturesque Battery lies at the mouth of St. John's Harbor, NL; the cliffs consist of sandstone and conglomerate of the Precambrian Signal Hill Group. The slopes are a source of rockfalls and avalanches, one of which (in 1959) killed 5 residents, prompting the City of St. John's to construct protective fencing at a cost of over \$300,000. The community is also subject to the threat of rising sea level and predictions of increased storm activity, ensuring that this part of St. John's will continue to be affected by natural hazards in the future.
