### Article abstract

The present paper discusses issues related to the translation of the English personal pronoun *you* in the French translations of Virginia Woolf's *The Waves* (1931). There are two published French translations of *The Waves*. The first one, *Les Vagues*, was translated by Marguerite Yourcenar and published in 1937. Around fifty years later, another version was published, under the same title but this time translated by Cécile Wajsbrot (1993). The two versions differ significantly when the use of *tu* and *vous* is concerned. This paper is concerned specifically with the original's mind-style (Fowler 1977) in other words, the way the characters' perceptions and thoughts, as well as their speech, are presented through language and how this is rendered in the translations. The quantitative analysis was realised using corpus-based studies tools which proved to be an asset in helping to identify the novels' mind-style.

## Who's Afraid of Virginia's *you*: a Corpus-based Study of the French Translations of *The Waves*

### RÉSUMÉ

Dans cet article, l'auteur examine la traduction du pronom personnel anglais «*you*» dans les deux traductions françaises de *The Waves* de Virginia Woolf (1931): *Les Vagues* traduit par Marguerite Yourcenar (1937) et la traduction de Cécile Wajsbrot (1993) du même titre. Ces deux versions présentent des différences significatives quant aux choix des traductrices entre «*tu*» et «*vous*». L'auteur étudie le «*mind-style*» (Fowler 1977) de l'original, c'est-à-dire la façon dont la perception, les pensées ainsi que le discours des personnages sont présentés par le biais du langage et la façon dont ce «*mind-style*» est rendu dans les traductions. L'analyse quantitative a été réalisée en utilisant les outils des études de corpus qui ont énormément facilité l'identification du «*mind-style*» des trois romans.

### ABSTRACT

The present paper discusses issues related to the translation of the English personal pronoun *you* in the French translations of Virginia Woolf's *The Waves* (1931). There are two published French translations of *The Waves*. The first one, *Les Vagues*, was translated by Marguerite Yourcenar and published in 1937. Around fifty years later, another version was published, under the same title but this time translated by Cécile Wajsbrot (1993). The two versions differ significantly when the use of *tu* and *vous* is concerned. This paper is concerned specifically with the original's *mind-style* (Fowler 1977) in other words, the way the characters' perceptions and thoughts, as well as their speech, are presented through language and how this is rendered in the translations. The quantitative analysis was realised using corpus-based studies tools which proved to be an asset in helping to identify the novels' *mind-style*.

### MOTS-CLÉS/KEYWORDS

Virginia Woolf's *The Waves*, French translation of *you*, corpus-based translation studies, *mind-style*

### Introduction

When reading Woolf's *The Waves*, one gets the feeling of being immersed into a world in which individuals keep merging and separating. The novel is constructed around the rhythm of waves breaking on a shore: the characters talk to themselves or to one another the one after the other in interior monologues, they grow up together, they grow apart, they reunite and separate again. There is a subsequent ambiguity to this continuous movement as it can be hard to understand where one character's self starts and the others end. This ambiguity is ultimately reflected in the novel's language. Indeed, it is sometimes not clear whom the characters are addressing: are they talking to one individual or to the whole group? And this is mainly due to the inherent ambivalence of the English pronoun *you*, which can serve to address one person in a polite manner or two or more people. This ambiguity is hard to convey in French because the translator has to choose between *vous* or *tu* depending on the situation which inevitably ends up disambiguating the situation.

In this paper, I discuss issues related to the translation of the English personal pronoun *you* in the two published French translations of Virginia Woolf's *The Waves* (1931): *Les Vagues*, translated by Marguerite Yourcenar (1937) and Cécile Wajsbrot (1993). It will be shown that the two versions differ significantly when the use of *tu* and *vous* is concerned. I am concerned specifically with the way the characters' perceptions and thoughts, as well as their speech, are presented through language, which is known as the novel's *mind-style* (Fowler 1977), and how this is rendered in the translations. I am using corpus-based studies tools for the quantitative analysis, which proved to be an asset in helping to identify the novels' *mind-style*.

### Mind-style

In a work of fiction, a novelist creates a fictional world which is presented from a particular angle, and is refracted through the values and views of a character or narrator. Consequently, as readers we are given

access to the world of the fiction through a person's view of the fictionally created world.<sup>1</sup> Point of view can be divided into two categories: *focalisation*,<sup>2</sup> which relates to the question of whose eyes and mind witness and report the world of the fiction, and *mind-style*, which concerns the individuality of the mind that does the focalising. Mind-style is a product of the way the characters' perceptions and thoughts, as well as their speech, are presented through language. Mind-style will thus be used to talk about the characters' language and how their use of language, more specifically their use of *you*, reflects their perception of reality and defines their relationships.<sup>3</sup>

### The translation of *you*

One cannot talk about the use of *you* without referring to notions of politeness. Politeness is a sociocultural phenomenon at the heart of basic social guidelines for human interaction. It reflects certain social and behavioural norms and rules which must be applied or observed in a given society in order to be "polite", i.e. showing consideration to others and displaying good manners. Hence, politeness has a social function, which is reflected in the whole society and links it to speech styles and formality. The linguistic expressions of politeness vary between cultures and communities and most of all between English on the one hand and languages like French, Spanish or Italian on the other hand, because these languages are built upon a "*tu/vous* subsystem" which is no longer used in English.

*Tu* and *vous* are surface linguistics forms used as indices of politeness norms and as such, they are examples of how language systems impose certain politeness norms. They reflect the participants' relative position in the social hierarchy, i.e. "social distance", but their use is also dependent on other factors including gender or age. Brown and Gilman (1960) discuss the notion of "power semantic" and explain that the use of *tu* and *vous* is "nonreciprocal; the superior says T[u] and receives V[ous]" (1960: 255). Their study follows the evolution of power semantic in history and they explain that the use of pronouns has evolved with *vous* in the singular now connoting high status and elegance:

for many centuries French [...] pronoun usage followed the rule of non-reciprocal T-V between persons of unequal power and the rule of mutual V or T (according to social-class membership) between persons of roughly equivalent power (1960: 257).

Brown and Gilman also discuss the use of these pronouns in terms of intimacy (*tu*) and formality (*vous*). On the whole, the use of *vous* in the singular is a form of address to a person of *superior power*<sup>4</sup>. In other words, according to the strength, age, sex, profession of a person, a relation of respect requires the use of *vous*. This relation is most of the time asymmetrical or non-reciprocal which means that someone using *tu* can receive a *vous* and vice versa. They also refer to the notion of solidarity to explain reciprocal or symmetrical norms of address. This concept requires the use of *tu* where this *tu* is the mark of a very close relationship or intimacy as well as feelings of belonging to the same social rank, for instance, or a mark of having the same political convictions, religion or profession. Hence, most of the time children address their parents and brothers and sisters with *tu* as well as lovers and close friends. Interestingly, it is always the person having the highest social status who has the responsibility to initiate the *tu*. However, *tu* can be used in a completely different manner to express condescension since the use of *tu* or *vous* depends on the level of formality or politeness involved between the interactants.

Baker (1992) illustrates the difficulty of translating *you* in one of the French translations of Agatha Christie's *Crooked House* (1949). The characters are a young man, Charles, and a young lady, Sophia, who have worked together and have been friends for some time. Charles has just asked Sophia to marry him:

'Darling- don't you understand? I've tried *not* to say I love you-'  
She stopped me.  
'I do understand Charles. And I like your funny way of doing things.'  
(1992: 97)

In French, the nature of the relation between the two characters has to be reflected in the choice of pronouns, i.e. using *vous* or *tu*:

– Mais vous ne comprenez donc pas? Vous ne voyez donc pas que je fais tout ce que je peux pour ne pas vous dire que je vous aime et...  
Elle m'interrompt.  
– J'ai parfaitement compris, Charles, et votre façon comique de présenter les choses m'est très sympathique (ibid).

The use of *vous* conveys a level of formality and politeness to the French text that is not overtly present in the original. The translator had to make a conscious choice between *vous* and *tu* according to the characters' relationship or his or her interpretation of the characters' relationships. For instance, he or she might have considered the period and concluded that the use of *tu* would have been a violation of a communicative norm and more precisely of politeness and social norms which stipulate that two persons of opposite sex and in a certain rank of society (high classes) are required to address each other with *vous*. *Tu* would have conveyed a relationship of familiarity that the translator thought did not exist between the two characters.

This brief example shows that translating from English into French requires the translator to make conscious choices about the nature of the relationships among participants and their social standings or gender to render formality or deference. The shift from *vous* to *tu* is a "familiar problem for screen translators as well as translators of novels" (Hatim and Mason 1990: 82) and in the rest of this paper, I will analyse and comment on Marguerite Yourcenar and Cécile Wajsbrot's choices. However, before investigating the use of *you* in Woolf's *The Waves*, I would like to introduce briefly the research paradigm in which this study is situated: corpus-based translation studies.

### Corpus-based translation studies

Since 1993, researchers have started to use corpora in translation studies and develop corpora specifically for this use. The term corpus refers to a collection of texts that is held in machine-readable form and can consequently be analysed both automatically and/or semi-automatically in a variety of ways. Corpus-based studies have developed rapidly<sup>5</sup> and focused on recurrent features of translated language known as "normalisation" and "simplification" (see, for example, Baker 1993, Kenny 2001; Laviosa 1997; Olohan and Baker 2000). Moreover, recent studies investigate certain relationships between originals and their translations (see Munday 1998 and 2003; and Bosseaux 2001, 2004, 2004a), and corpus techniques and tools are being employed to identify the translators' "style" in their translations (Baker 2000).

Studies in corpus-based projects can be hypothesis-driven and aim at finding textual evidence for abstract notions like "normalisation" or "simplification" or data-driven, and in this case, they set out to describe low-level linguistic features of texts which will or will not be explained in terms of these abstract notions. Whatever the type of project, most corpus-based translation studies are designed to show what electronic corpora can do when compared to manual studies. This is the view adopted in the present study, which sets out to demonstrate that corpus-based translation studies and its tools can greatly facilitate and sharpen the process of comparison.

This short study uses a parallel corpus composed of one English novel and its two published French translations: Virginia Woolf's *The Waves* (1931), and its two translations (*Les Vagues*, 1937, translated by Marguerite Yourcenar and *Les Vagues*, 1993, translated by Cécile Wajsbrot). The relevant texts have been scanned and put in machine-readable form and I study them using corpus-analysis software tools and techniques (WordSmith Tools and Multiconcord).

### *You in The Waves*

*The Waves* is composed of interludes in which a narrator speaks and series of soliloquies where six characters speak in the first person and address each other using the personal pronoun *you*. Deixis is the system of internal references of which *I* is the key (Benveniste (1966, 1972) and *I* is a function that presupposes other roles, most particularly *you*, as the other of the discourse. Hence, the personal pronoun *you* in the soliloquies or interior monologues of *The Waves* is used to identify the six participant(s).

I would like to emphasise again that it is hard to evaluate *The Waves* in terms of formality and distance because there is always distance between the characters even when they are together as they are always trying to decide where one of them leaves off and another one begins. This difficult process demands perspective and protection from merging or enmeshment and Woolf seems clear that these characters are hopelessly enmeshed even as they are totally isolated and alone. As mentioned previously, in English *you* allows conveying this ambiguous state whereas French pronouns *vous* and *tu* disambiguate the situation. Reflecting on this issue, Toni McNaron, a professor in English at the University of Minnesota, told me: "I wish there were a way to combine the meanings of *vous* and *tu* into a new pronoun, in any language we could find or conceive" (private email conversation 2000). However, without the existence of such a pronoun, *vous* could be argued to convey the ambiguity of the original, to a certain extent, as will be argued later on.

Using a piece of software called WordSmith Tools, I obtained the number of times *you* and its derivatives<sup>6</sup> appear in *The Waves*:

Table (a) *You* and derivatives in *The Waves*:

	Number	%
YOU	312	0.40
YOUR	109	0.14
THOU	6	
YOURS	6	
YOURSELF	1	
YOURSELVES	1	

The percentage indicates the ratio of the word under analysis to the overall number of words. Hence, there are 312 instances of the word “you” in *The Waves* and it accounts for 0.40% of all the words in the text. There are also 109 instances of *your*, 6 of *yours*, 6 of *thou*, 1 of *yourself*, and 1 of *yourselves*. In French, the translation of these words is multiple with *tu*, and *vous* for *you* as personal pronoun subject, e.g. “*tu marches*” and “*vous marchez*” (*you walk*) and “*tu marches*” (*you walk*). *Te/t’, toi* and *vous* are the translations of the personal pronoun object, e.g. “*je te/vous pardonne*” (I forgive *you*), “*je t’aide*” (I help *you*), “*c’est toi/vous que j’aide*” (It’s *you* I help/I help *you*). *Ton, ta, tes, votre, vos*, are the translations of the possessive adjective *your*, e.g. “*ton/tes choix*”, “*votre/vos choix*”, “*ta/tes voiture (s)*” (*your choice(s), you car(s)*). *Le(s) tien(s), la/les tienne(s), le(s) vôtre(s), la vôtre* are the translations of the possessive pronoun *yours*; *toi-même* is the translation of *yourself* and *vous-même(s)* of *yourselves*.

***Vous, tu* and derivatives in *Les Vagues* (Yourcenar, 1937)**

Since the French versions are longer than the English text<sup>7</sup>; the percentages are in fact more pertinent than the absolute figures. The figures for *vous* and its derivatives are as follows:

Table (b) *Vous* and derivatives in Yourcenar’s *Vagues*:

	Number	%
VOUS	377	0.40
VOS	48	0.05
VOTRE	63	0.07
VÔTRE	5	
VÔTRES	3	
TOTAL 0.53 vôtres (3), vôtre (5), votre (63), vos (48)	496	

Using the “joining” facility of WordSmith Tools, the entries (377, 48, 63, 5 and 3) can be manually joined in order to have a total for *vous* and its derivatives. The program then put the joint frequencies of all the marked words with the frequency of the one that was marked first:

Table (c) Wordlist’s “Joining” facility:

N	Word	Freq.	%	Lemmas
11751	VOULAIS	2		
11752	VOULAIT	2		
11753	VOULIONS	1		
11754	VOULU	5		
11755	VOUS	496	0.56	vos(48),votre(63),vôtre(5),vôtres(3)
11756	VOÛTE	3		
11757	VOÛTÉE	1		
11758	VOÛTENT	1		
11759	VOÛTES	2		
11760	VOÛX	1		
11761	VOYAGE	5		
11762	VOYAGÉ	1		
11763	VOYAGEAIENT	1		

There are 496 instances of *vous* and its derivatives, i.e. they represent 0.53% of the text.  
The figures for *tu* and derivatives are as follows:

Table (d) *Tu* and derivatives in Yourcenar’s *Vagues*:

	Number	%
TU	14	0.01
TE	2	
TOI	7	
SUBTOTAL	23	0.03
TES	2	
T’	2	
TON	1	
TOTAL	28	0.03

When retrieving the data with Wordlist, one has to be aware of homonyms. For instance, in French *ton* can mean *your* but it can also mean *tone* or *pitch*. There were initially 7 instances of *ton* but only one was referring to *your*. There was also a possible misunderstanding of the occurrence of *t* in reflexives as the software was computing all instances of the single letter and was counting *t* in expressions like “semble-*t*-il” or “murmura-*t*-elle”. There were initially 24 instances of *t* and I used another piece of software called Multiconcord<sup>8</sup> to select those which corresponded to *te/t’* and found only two.

Table (e) Progress report window indicating the number of items found in the ST (hits):

Table (f) Results window allowing selecting and viewing the hits:

Hence, in Yourcenar’s translation, there are 28 words which correspond to the second person singular pronoun *tu*, which means that *tu* and its derivatives make 0.03% of the text. The total was reached by using the same “joining” procedure described previously. Of these 28 instances, there were 5 that actually corresponded to the English “thou”, which appears in a poem recited by one of the characters. Yourcenar thus uses *tu* and its derivatives 23 times to translate *you* and its derivatives when they are used to identify the other participants in the discourse.

Vous, Tu and derivatives in *Les Vagues* (Wajsbrot 1993)

The figures for *vous* and derivatives are as follows:

Table (g) *Vous* and derivatives in *Wajsbrot's Vagues*:

	Number	%
VOUS	185	0.25
VOS	23	0.03
VOTRE	17	0.02
VÔTRE	3	
VÔTRES	1	
TOTAL vos(23),votre(17),vôtre(3),vôtres(1)	229	0.31

There are 229 instances of *vous* and its derivatives, i.e. they represent 0.31% of the text. Let's now consider the figures for *tu* and its derivatives:

Table (h) *Tu* and derivatives in *Wajsbrot's Vagues*:

	Number	%
TU	88	0.12
TE	25	0.03
TOI	45	0.06
TA	16	0.02
TES	14	0.02
SUBTOTAL te(25),tes(14),toi(45),tu(88)	188	0.25
T'	18	0.02
TIENNE	1	
TIENS	1	
TON	25	0.03
TOTAL	233	0.31

There were initially 42 instances of *t'* but only 18 stood for *te/t'*. There were 30 instances for *ton* and 25 of these were possessives. In Wajsbrot's translation, there are 233 cases which correspond to the use of the second person pronoun of the singular, i.e. it represents 0.31% of the text.

Summary

Table (i) *Summary*:

	Tu	Tu (%)	Vous	Vous (%)
Yourcenar	28	0.03	496	0.53
Wajsbrot	233	0.31	229	0.31

The statistics show that Wajsbrot used an almost identical number for *tu* and *vous* as there is the same ratio of *tu* and *vous* and their derivatives (0.31%). Yourcenar's use of *vous* and derivatives is much higher: 0.53% against 0.03% for *tu* and derivatives. I believe that these figures point to microtextual shifts that will impact on macrotextual aspects of the text related to the novel's mind-style, as the increased use of *tu* will affect the distance and register of the translations. Corpus-based studies tools allowed me to gain a rapid access to the three novels' structural make up, i.e. their linguistic composition. The quantitative analysis done, I could concentrate on the qualitative analysis. Let's now look at specific passages, first with Yourcenar's use of *tu*, *ton* and *tes*.

Tu/ton/tes in Yourcenar

In order to assess these macrotextual shifts related to the narrative structure, microtextual shifts are considered using Multiconcord. The examples have been located using the French text as “source” text to be able to look for instances of *tu*:

Table (j) Multiconcord’s search instructions window:

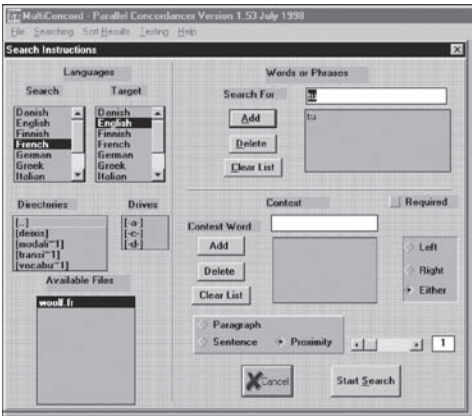

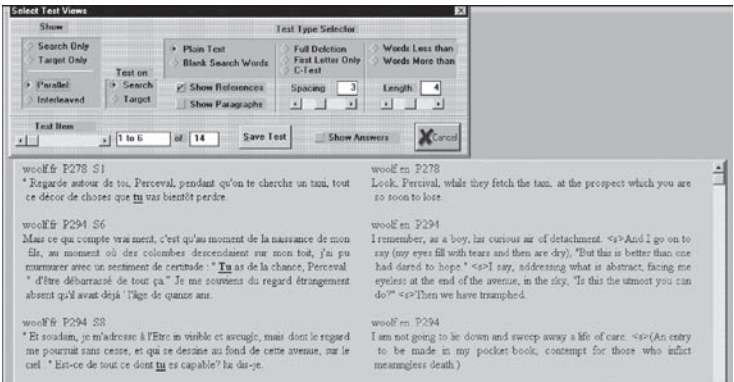

Table (k) Result window allowing seeing the source text along with the target text:

Yourcenar uses *tu* 14 times, five of which are in a poem told by one of the characters, Louis<sup>9</sup>. Hence, there are 9 instances of *tu* that correspond to the English *you* when it is used in the characters’ discourse. There were also two examples of *tes*. After investigating all these passages, I came to the conclusion that *tu* and its derivatives in Yourcenar’s translation are used when characters speak to themselves and when they address Percival, the seventh character in *The Waves* who never speaks. It is also used when the characters address entities like friendship, death or the “western wind”, i.e. as a lyrical *tu*. For instance in the following extract, Rhoda speaks to herself:

YOURCENAR P313 S2 <p><s>” La débordante douceur de cette découverte ruisselle sur les parois de mon âme et libère en moi le sens de la compréhension.” Ne cherche «plus, me dis-je. <s>Tu as atteint le but.” Le rectangle a été posé sur le carré, et la spirale par-dessus le rectangle. <s>Nous avons été entraînés le long des galets jusqu’à la mer.

WOOLF P313 <p><s> The sweetness of this content overflowing runs down the walls of my mind, and liberates understanding. <s>Wander no more, I say; this is the end. <s> The oblong has been set upon the square; the spiral is on top. <s> We have been hauled over the shingle, down to the sea.

Rhona is one of the three female characters, which all have very different personalities. She is a passive character and most of the actions she is involved in are done to her. In this example, she expresses the end of a process without involving herself saying “this is the end”. Yourcenar translates this process with “tu as atteint le but” [you reached the goal] whereas the original conveyed the idea that something had reached its course. Hence, the mind-style of the original and that of the translation varies since Rhona’s participation in the action is expressed differently.

In the following extract, Yourcenar also uses *tu* when Bernard addresses “the western wind”:

YOURCENAR P382 S1 <p><s> “O vent d’ouest, tu es l’ennemi mortel de ma table d’acajou, de mes guêtres, et aussi, hélas! de cette petite actrice si vulgaire qui est ma maîtresse, et qui n’a jamais réussi à perdre son accent faubourien.»

WOOLF P382 <p><s> O western wind, you are at enmity with my mahogany table and spats, and also, alas, with the vulgarity of my mistress, the little actress, who has never been able to speak English correctly.

I thus discovered that when the characters talk to one another, Yourcenar privileges *vous*. Reasons behind her choices could be explained in terms of the period in which she was translating the book (1937), as the usage of *tu* seemed to be not as widespread as when the second translation was written (1993). However, since the children have been raised together, *tu* could have been used for one to one conversation when the characters are children and later on when they are adults. Having considered Yourcenar’s use of *vous* and *tu*, I am turning now to Wajsbrot’s choices.

#### ***Tu* in Wajsbrot’s translation, *vous* in Yourcenar’s**

At the beginning of the novel, the children talk and define themselves by saying what they see and what they think of each other. In the following passage, Susan talks to Bernard and Wajsbrot’s use of *tu* displays more intimacy or closeness between the two children than Yourcenar’s *vous*, which creates distance as can be seen in the following extracts from a dialogue between Bernard and Susan:

WOOLF P55 <p><s> ‘Now you trail away,’ said Susan, ‘making phrases. <s>Now you mount like an air-ball’s string, higher and higher through the layers of the leaves, out of reach. <s>Now you lag. <s>Now you tug at my skirts, looking back, making phrases. <s> you have escaped me. <s>Here is the garden. <s>Here is the hedge. <s>Here is Rhoda on the path rocking petals to and fro in her brown basin.’

YOURCENAR P55 <p><s> - Vous voilà de nouveau parti avec vos phrases, dit Suzanne. <s>Voilà que vous montez de plus’ en plus haut comme la ficelle d’un ballon rouge, à travers les couches de feuillages, hors de portée. <s>Et vous traînez; vous tirez sur mes jupes; vous regardez en arrière, tout occupé à tourner des phrases. <s>Vous m’avez échappé. <s>Voici le jardin. <s>Voici la haie. <s>Voici Rhoda dans le sentier: elle berce un bassin brun plein de pétales de fleurs.

WAJSBROT P55 S5 <p><s>» Tu traînes, dit Susan, tu fais des phrases. <s>Tu montes comme le fil d’un ballon, traversant les couches de feuillage, toujours plus haut, hors de portée. <s>Tiens, tu es distancé. <s>Tu tires sur mes jupes, tu te retournes, tu fais des phrases. <s>Tu m’as échappé. <s>Voilà le jardin. <s>La haie. <s>Voilà Rhoda sur le chemin, elle fait tanguer la jatte marron et ses pétales.»

In this passage, it is clear that Susan is talking to Bernard because she uses twice the expression “making phrases” which is linked to this character. Indeed, Woolf uses specific expressions and motifs throughout the novel which are significant to understand the characters’ personalities and development. For instance, Rhoda is associated with the basin in which she rocks petals; Jinny is linked to the dancing leaf that echoes her fluidity and Louis to the beast that enforces him in solitude. Hence, this is a one-to-one conversation and both translations convey a different relationship between the two children.

WOOLF P53 <p><s> ‘Run!’ said Bernard. <s> ‘Run! <s>The gardener with the black beard has seen us! <s>We shall be shot! <s>We shall be shot like jays and pinned to the wall! <s>We are in a hostile country. <s>We must escape to the beech wood. <s>We must hide under the trees. <s>I turned a twig as we came. <s>There is a secret path. <s>Bend as low as you can. <s> Follow without looking back. <s>They will think we are foxes. <s>Run!

YOURCENAR P53 <p><s>- Fuyons, dit Bernard. <s>Fuyons! <s>Le jardinier à la barbe noire nous a vus! <s>On va nous tirer dessus! <s>On va nous tirer comme des corneilles, et nous clouer au mur. <s>Nous sommes en pays ennemi. <s>Sauvons-nous dans le bois de hêtres. <s>Cachons-nous sous les arbres. <s>J'ai cassé une branche en passant. <s>Elle marque un chemin secret. <s>Courbez-vous aussi bas que possible. <s>Suivez-moi sans regarder en arrière. <s>Ils vont nous prendre pour des renards. <s>Fuyons!

WAJSBROT P53 S11 <p><s> «Cours! dit Bernard. <s>Cours! <s>Le jardinier à barbe noire nous a vus! <s>Il va nous tuer! <s>Il va nous tuer comme des geais et nous clouer au mur! <s>Nous sommes dans un pays hostile. <s>Il faut nous évader dans la forêt de hêtres. <s>Nous cacher sous les arbres. <s>J'ai retourné une brindille à l'aller. <s>Il y a un passage secret. <s>Baisse-toi autant que tu peux. <s>Fuis sans te retourner. <s>Ils vont nous prendre pour des renards. <s> Cours!

This passage is again more formal in Yourcenar's translation with the use of *vous* and imperatives in the plural second person (e.g. *courbez-vous*). The translations also convey two different perspectives as Bernard, in Yourcenar's translation, is more involved in the action with the use of "fuyons" [let's run away], i.e. they are running away together, whereas in Wajsbrot's translation, Bernard gives orders or advice to Susan only; using "cours" [run]. In other words, Bernard takes on different roles in the translations, which has consequences on the texts' mind-styles.

As I studied all the examples taking place during the characters' childhood phase, it became apparent that for one to one conversations Wajsbrot privileges *tu* over *vous* and that this choice brings about differences in terms of mind-style, distance and register when compared with Yourcenar's translation of the same passages. The children's conversations are more formal or ceremonious in Yourcenar's translation than in Wajsbrot's which displays a greater level of intimacy and familiarity. Moreover, because *The Waves* follows the lives of its six characters, they also interact when they are adults and the translators' choices are also very telling at this later stage. I have selected two examples from the character's adulthood which exemplify and confirm the translators' strategies:

WOOLF P237 <p><s>But you will never hate me,' said Jinny. <s>You will never see me, even across a room full of gilt chairs and ambassadors, without coming to me across the room to seek my sympathy. <s>When I came in just now everything stood still in a pattern. <s>Waiters stopped, diners raised their forks and held them. <s>I had the air of being prepared for what would happen. <s>When I sat down you put your hands to your ties, you hid them under the table. <s>But I hide nothing. <s>I am prepared. <s>Every time the doors open I cry "More!" <s>But my imagination is the bodies.

YOURCENAR P237 <p><s>- Mais moi, vous ne me haïrez jamais, dit Jinny. <s>Jamais vous ne m'apercevrez, même à l'autre bout d'un salon plein d'ambassadeurs et de fauteuils dorés, sans traverser la pièce pour venir à moi, en quête de ma sympathie. <s>Quand je suis entrée, il y a un moment, tout s'est immobilisé comme à l'intérieur d'un cadre. <s>Les garçons s'arrêtaient; les fourchettes des dîneurs restaient suspendues en l'air. <s>J'étais prête à tout événement. <s>Quand je me suis assise, vous vous êtes mis à assurer vos nœuds de cravates, vous avez caché vos mains sous la table. <s>Moi, je ne cache rien. <s>Je suis prête. <s>Chaque fois que la porte s'ouvre, je crie: «Encore! <s>» comme un enfant qui redemande de quelque chose. <s>Mais mon imagination est toute corporelle.

WAJSBROT P237 S6 <p><s>» Tu ne pourras pas me détester, dit Jinny. <s>Jamais tu ne pourras me voir, même dans une pièce pleine de chaises dorées, d'ambassadeurs, sans réclamer ma sympathie. <s>Quand je suis arrivée, tout était immobile, comme sur un dessin. <s>Les serveurs s'étaient arrêtés, les dîneurs gardaient leurs fourchettes levées. <s>J'avais l'air d'être prête à ce qui allait suivre. <s>Quand je me suis assise, tu as porté la main à ta cravate, et toi, tu les as cachées sous la table. <s>Moi je ne cache rien. <s>Je suis prête. <s>Chaque fois que la porte s'ouvre, je crie: «Encore!»

This passage shows the ambiguity of the English pronoun *you*. The characters are gathered for dinner and speak the one after the other. Yourcenar chooses to translate this *you* with *vous* throughout the passage. She might have thought that Jinny was addressing the group but most of the times, it can also be interpreted as a formal *vous* used to address one character. However, since the passage starts with "but" it is reasonable to think that Jinny actually replies to the character that was speaking before her, Louis, and in that case

Yourcenar's use of *vous* conveys distance and formality between the characters. Wajsbrot chooses *tu*, which is not ambiguous and forecloses the possible ambiguity of the original by conveying more intimacy and closeness during the discussion. Nevertheless, on one occasion, the context makes it clear that Jinny is talking to the whole group when she says: "your hands to your ties" because of the plural form. Yourcenar translates "vos nœuds de cravates" [your knots of ties] which also addresses the whole group, whereas Wajsbrot translates "la main à ta cravate" [the hand to your tie] which addresses only one character. Hence, the context can help to disambiguate the use of "you" and we end up with different addressees, which have consequences on the way we interpret the way the characters interact in this passage and by extension, in the novel.

In the following passage, Louis speaks to Rhoda. At this stage in the novel, they are lovers:

WOOLF P466 <p><s>'Something flickers and dances,' said Louis. <s>'Illusion returns as they approach down the avenue. <s>Rippling and questioning begin. <s>What do I think of you - what do you think of me? <s>Who are you? <s>Who am I? <s>- that quivers again its uneasy air over us; and the pulse quickens and the eye brightens and all the insanity of personal existence without which life would fall flat and die, begins again.

YOURCENAR P466 <p><s>- Une lueur tressaille et danse, dit Louis. <s>A mesure qu'ils descendent l'avenue et qu'ils se rapprochent de nous, l'illusion recommence, et l'ondoiement des questions sans fin. <s>Qu'est-ce que je pense de vous? <s>Que pensez-vous de moi? <s>Qui êtes-vous? <s>Qui suis-je? <s>L'âcre mélodie résonne à nouveau, et notre pouls se précipite, et nos yeux brillent, et tout le délire de l'existence individuelle recommence, lui sans qui la vie n'aurait plus qu'à céder la place à la mort.

WAJSBROT P466 S5 <p><s>» Il y a quelque chose qui danse, vacille, dit Louis. <s>Sur l'avenue, ils approchent, et l'illusion revient. <s>La cascade des questions renaît. <s>Qu'est-ce que je pense de toi - que penses-tu de moi? <s>Qui es-tu? <s>Qui je suis? le malaise plane encore, le pouls s'accélère, le regard brille, renaît la folie de l'individualité, sans quoi l'existence retomberait, finirait.

As mentioned previously, Louis and Rhoda have known each other since childhood and are lovers. Yourcenar's *vous* creates an unnecessary distance between the two characters whereas Wajsbrot's use of *tu* conveys a legitimate intimacy to the passage.

In the second passage, the characters are gathered after having been separated for a long time and Neville comments on their emotions:

WOOLF P417 S1 <p><s>'Now sitting side by side,' said Neville, 'at this narrow table, now before the first emotion is worn smooth, what do we feel? <s>Honestly now, openly and directly as befits old friends meeting with difficulty, what do we feel on meeting? <s>Sorrow. <s>The door will not open; he will not come. <s>And we are laden. <s>Being now all of us middle-aged, loads are on us. <s>Let us put down our loads. <s>What have you made of life, we ask, and I? <s>You, Bernard; you, Susan; you, Jinny; and Rhoda and Louis? <s>The lists have been posted on the doors.

YOURCENAR P417 <p><s>- Assis côte à côte à cette table étroite, dit Neville, que ressentons-nous, maintenant que notre première émotion s'est effacée? <s>Sincèrement, sans détours, comme il convient à de vieux amis qui se sont donné beaucoup de peine pour arriver à se réunir, que ressentons-nous? <s>De la tristesse. <s>La porte ne s'ouvrira pas: Perceval ne viendra plus. <s>Et nous sommes chargés de fardeaux. <s>Nous sommes arrivés au milieu de la vie, et ce poids pèse sur nos épaules. <s>Déposons-le. <s>Demandons-nous les uns aux autres ce que nous avons fait de notre vie. <s>Vous, Bernard? <s>Vous, Suzanne? <s>Vous, Jinny? <s>Et Rhoda? <s>Et Louis? <s>Des listes ont été épinglées sur les portes.

WAJSBROT P417 <p><s>» Avant que ne s'émousse l'émotion première, dit Neville, assis à cette table, qu'éprouvons-nous? <s>Honnêtement et sans détours, comme il sied à de vieux amis qui ont eu du mal à se rencontrer, quel sentiment éprouver? <s>De la douleur. <s>La porte ne s'ouvrira pas; il ne viendra pas. <s>Nous sommes sous la charge. <s>Nous sommes d'âge mûr et portons tous un poids. <s>Déposons-le. <s>Qu'avez-vous fait de la vie, et moi, qu'en ai-je fait? <s>Toi, Bernard; Susan; toi, Jinny; et Rhoda, et Louis? <s> Les listes sont affichées aux portes.

This passage clearly shows that when Yourcenar translates an individual *you*, she uses a formal *vous*.

Conclusion

As discussed previously, the original English text is difficult to comprehend because there is always a mixture between distance and intimacy when the characters address one another. I emphasised that answers can be found in the context (e.g. “ties”) or by referring back to the previous paragraph but what stands out is that in many cases, ambiguity prevails. As a matter of fact, the characters often mention that they do not know when their own selves start and when their friends’ selves end. As Bernard says, they are:

A single flower as we sat here waiting, but now a seven-sided flower, many-petalled, red, puce, purple-shaded, stiff with silver-tinted leaves - a whole flower to which every eye brings its own contribution! (Woolf 1931: 151).

However, when translating into French, the translators have to make a conscious choice as to whom they address and how.

Table (I) Summary

	Tu	Tu (%)	Vous	Vous (%)
Yourcenar	28	0.03	496	0.53
Wajsbrot	233	0.31	229	0.31

Figures have shown that the first translator, Yourcenar, opted for *vous* more often than for *tu* and that the second translator, Wajsbrot, used a more even distribution of *vous* and *tu*. The software could not tell me what this “you” was referring to but when I went through the examples, I found that for one to one conversation, Wajsbrot opted for an intimate *tu* whereas Yourcenar used a more formal *vous*. As discussed earlier on, it is sometimes not clear whether the English *you* serves to address someone formally (*vouvoisement*) or the whole group. It might be that Yourcenar privileged *vous* not only to address someone as *vous* but to address the group because she thought of the characters as a group and that Wajsbrot considered these characters as individuals and favoured an intimate *tu*. I would like to claim that regardless of the reasons behind the translators’ choice, the choice between *tu/vous* has consequences on the register and mind-style of the novel. In other words, the microtextual shifts have consequences on the macrostructure and point of view of the novel since Yourcenar’s choice of *vous* over *tu* renders the text more formal and distant than Wajsbrot’s translation, which is more intimate and conveys more familiarity between the characters. However, if we compare the translations with their original, one can argue that Yourcenar’s choice of *vous* as the more inclusive pronoun (both singular and plural) reflects more adequately the original’s fluidity and undecidability as regards who exactly is being addressed at any one moment. Whatever explanations we choose, it is indisputable that the worlds depicted in the translations present different relationships between the characters and corpus-based translation studies tools helped me to gain an insight of the texts, which a manual analysis would not have allowed. This is not to say that a manual analysis would not have allowed insight to be gained into the texts but the difference is the extent to which this would have been possible. The tools allow breadth and depth of coverage but a manual analysis would only allow depth of coverage in selected passages not on the whole text as it would be impossible to maintain the level of concentration required to find all the instances of “you” in *The Waves* and its translations. In other words, I have used corpus processing software as tools to facilitate the quantitative analysis. The tools have provided figures that I exploited in my qualitative analysis and as such they greatly facilitated the analytical process. Finally, I would like to add that corpus processing tools give access to a larger amount of data, when compared to manual analyses, which makes it feasible to pursue macroanalyses by going from the microstylistic analysis of individual passages to the macrostylistic interpretation of the whole text. However, as Opas and Rommel point out, even though the computer can make “life easier for the literary critic”, it cannot “generate meaning and it will always remain a tool” (1995: 262), which needs to be emphasised as this is the view adopted in my work.

NOTES

1. The narrator is not necessarily a person and could be an animal, an inanimate object or an anonymous/faceless narrator. Person is used here as a convenient notation for a faceless narrator.
2. A term created by Genette (1980).

3. In modern stylistics, one of the most influential studies is Halliday's (1971), a study of William Golding's *The Inheritors*, which illustrates how the analysis of transitivity can contribute to an understanding of the particular mind-style projected in a text, i.e. the world-view of a narrator or a character, constituted by the ideational structure of the text.
4. It must be noted that these are general conclusions concerning the use of *tu* and *vous* and that usage also differs from one individual to another.
5. See Laviosa (2002) and Olohan (2004) for comprehensive accounts of the theories and concepts used in corpus-based translation studies.
6. The possessive adjective *your*, possessive pronoun *yours*, and personal pronouns *yourself* and *yourselves*. The old English second person pronoun of address *thou* is also used in the original.
7. Woolf's *The Waves* is composed of 78,104 words, Yourcenar's translation of 91,623 words and Wajsbrot's text of 74,406 words.
8. Multiconcord is a multilingual concordancer developed by David Woolls and a consortium of European Universities as part of the Lingua program (Woolls 1997). It allows the user to select a pair of languages, i.e. a source and a target language, and to enter a search pattern of words or phrases in a selected language, which may or may not be the source language. Multiconcord then gives a list of all the source items it has found, the hits, and allows seeing the full sentence or sentences in the source language along with the sentences which the aligning engine considers to be equivalent in the target language. The aligner works within the parallel paragraphs and attempts to match up all sentences until it reaches the sentence for which the search routine has recorded a hit. Then, it records the matching location in the target language paragraph.
9. Interestingly, Wajsbrot keeps the poem in English in her translation.
