ISBN: 978-1-897095-50-8

*Facies Models 4* is the essential volume on sedimentary succession interpretation, and is presented in full colour. This is an updated new edition of the original highly popular textbook *Facies Models*, and incorporates the enormous advances in our understanding of depositional environments since the last edition was issued in 1992. Coverage of this topic is at the advanced undergraduate to graduate-student level, making this book accessible to anyone with an interest in sedimentary environments.
